# INSTRUCTIONS

## Connecting to iPod® or iPhone™

1. Plug the iCarPlay Wireless 300 dock connector into your iPod or iPhone.
2. Press Play on iPod/iPhone if it does not start automatically.

**NOTE:** Music must be playing to power on the iCarPlay Wireless 300.

3. The iCarPlay Wireless 300's LCD screen will light up and display the most recently used channel pre-set.

**NOTE:** Illustrations may vary in appearance from actual product.

## Manual Tuning

1. Press and hold  button until the LCD display blinks.
2. Press and release the  or  button to adjust the channel up or down.
3. Once the display stops flashing, the iCarPlay Wireless 300 will broadcast on the station displayed.

**IMPORTANT:** For best results, before programming and using the iCarPlay Wireless 300, find FM channels that have the weakest signals in your area. Channels with only static are most ideal (try lower channels, like 88.1). Traveling to different areas may require using alternative channels.

## Setting Presets

1. First, manually tune to the channel you want to store to memory as described in the Manual Tuning section.
2. While the LCD display is still flashing the current frequency, press and hold down (P1, P2, or P3) for several seconds until the display stops flashing.
3. The preset station is now stored at that location.

## **Recalling Presets**

1. Simply press any of the three preset buttons (P1, P2, or P3) to select the pre-programmed frequency.
2. The iCarPlay Wireless 300 will automatically tune to the channel that you have stored in memory.

## **Playing your iPod or iPhone with iCarPlay Wireless 300**

1. Press play on your iPod or iPhone as you normally would.
2. Choose and push one of the pre-set buttons on the iCarPlay Wireless 300.
3. Turn on your radio and tune it to the same FM channel that is displayed on the iCarPlay Wireless 300's LCD display.
- 4 . Your music selection should begin to play through your audio system's speakers.

## **Charging or syncing your iPod or iPhone to iTunes while using iCarPlay Wireless 300**

You can charge your iPod or iPhone through the iCarPlay Wireless 300 with the included USB cable. You can also use the cable to sync to iTunes on your computer.

1. Make sure the iCarPlay Wireless 300 is plugged in and operating. Plug the smaller mini USB end of the cable into the side of the iCarPlay Wireless 300.
2. Plug the USB end of the wire into the available USB 2.0 port. Your iPod or iPhone should show that it is charging. If you are plugging into a computer with iTunes, you will also be synced.

**NOTE:** While syncing with iTunes, the LED display will turn off.

## **iCarPlay Wireless Display Settings**

Please note that in order to preserve the battery life of your iPod and iPhone the display of the iCarPlay Wireless 300 will automatically shut off after a period of time when no buttons have been pushed. To “wake up” the display, simply press any button.

## Performance Tip

**NOTE:** In some areas where clear reception is a challenge, connect the included USB cable to the iCarPlay wireless 300. The cable will act as an antenna and may improve the performance of the iCarPlay Wireless 300.

The USB cable does not need to be connected to another device to act as an antenna.

## **Performance & Safety Tips:**

- Connecting and/or setting iCarPlay® Wireless 300 while driving may cause serious injury and/or death. Drive responsibly—connect and set iCarPlay Wireless 300 BEFORE operating your vehicle and pay attention to the road while driving.
- For best performance, select an iCarPlay Wireless 300 channel that is not occupied by a strong local FM radio station.
- Certain car radios may experience more difficulty receiving clear signals than others. Location of the antenna can affect signal strength. Some vehicles have a metallic film in the windows that can also make it harder to receive clear signals from the iCarPlay Wireless 300.
- In dense metropolitan areas, there are cases where all iCarPlay Wireless 300 pre-set stations are occupied by local radio stations. Sometimes a station setting

next to a local station may be strong enough to 'bleed' over to the adjacent frequencies. Use manual tuning to eliminate interference.

- Radio frequencies from local stations can 'bounce' from hills and buildings and may cause momentary interference.
- A steel bridge or parking garage may act like an antenna, strengthening local and distant radio station signals. You may need to wait until you are over the bridge or out of the structure for clearest reception.
- The iCarPlay Wireless 300 transmitter strength is regulated and limited by the FCC. iCarPlay Wireless 300 transmits at the power allowable by law.
- iCarPlay Wireless 300 is designed to transmit within your car's perimeter while not interfering with the surrounding public airwaves.

**FCC Notice:** This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
