**1** To use, simply release the two red shock cords.

There are many situations when a tripod is needed to capture a great shot: The fleeting photo opportunity of the perfect sunset, the hummingbird that hovers for just a few moments, or the family photo with everyone in it.

The problem is that most tripods are heavy, difficult to carry and slow to set up which causes many missed photo opportunities. The **ZipShot™** tripod is the answer. Just release the two red shock cords and the legs of the **ZipShot™** spring open in seconds to a height of 44" (112cm). Attach your camera and you're ready to shoot.

At only 11 oz. (312g) and 15" (38cm) when folded, the **ZipShot™** is ultra-lightweight and ultra-compact. Constructed of sturdy, high-quality aluminum with a heavy-duty, metal ball-head, it will hold a DSLR camera and lens up to 3 lbs. (1361g) and all point-and-shoot cameras. A single release lever allows the camera to be positioned at any angle so vertical and horizontal shots are easy.

With the **ZipShot™**, you can capture the great shots you've been missing.

**2** Tripod legs spring open in seconds.

**3** Mount a camera and you're ready to shoot.
