Fulfilling the Promise of “Entertainment Made Simple”

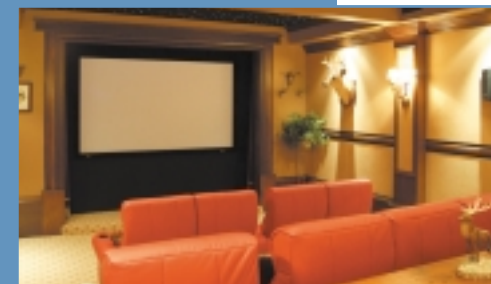

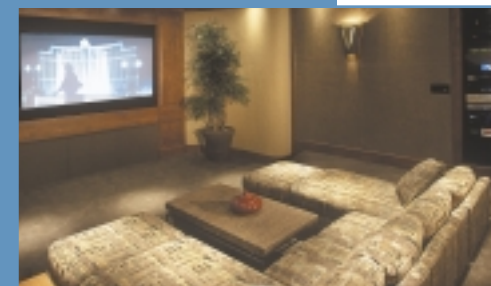

For the past twenty years, Universal Remote Control, Inc. (URC) has made remote controls for the finest Audio Video equipment manufacturers in the world. URC remote controls have been awarded numerous honors, awards and glowing reviews for their design and manufacturing. Throughout our history, URC has pioneered research and development to provide remote controls that have the memory and program capacity to fully automate the most complex systems with one touch and can be used inside and outside the home.

The Complete Control System was presented with the prestigious 2005 Innovations Design and Engineering Award for best Integrated Home System by the Consumer Electronic Association.

Complete Control Comes Home

Complete Control Comes Home

Effortless System Control for Your Family Throughout the House.

Wherever you go in your home, you'll have access to music or video on a whim. You know that your custom installed audio video system will bring excitement, joy and delight to your family. Easy, attractive controls invite you to use the system anytime, anywhere. Here's what satisfied families say about using our custom remote controls in their homes:

Universal Remote Control®

"Music outside on the Patio is easy now. We used to have to go inside to change anything. Now, we can choose a song we like or change the volume by simply picking up the Patio remote control."

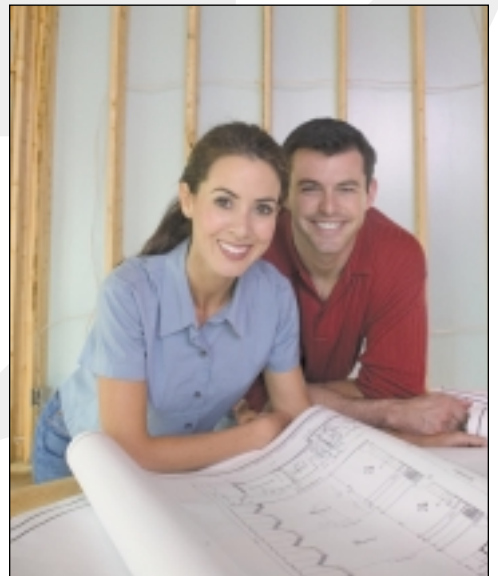

"I love having all the ugly electronics hidden away in cabinets. I was tired of looking at equipment every day and I hated when my friends commented about all of the 'piles of gear in my house.' Now my home looks exactly the way I want. I can use the system anywhere without opening cabinet doors or pointing remotes."

"It was easy to feel at a loss each time we visited the kids. We could never use the TV or Stereo System. Now it's different. No matter what room we're in, the custom remotes always work for us. You can just push one button, and you don't have to point the remote at anything."

"We are building a new house, when we are finished we want our family to enjoy every bit of it. Home entertainment will be a big part of that. Remotes that can work anywhere inside and out are important to us."

"In the past we needed to walk around the house to turn things off. Now one touch to a remote turns off every piece of electronics in our home, even the kids TV's. We love the security of knowing that everything is turned off."

A Remote Control for Every Purpose, Every Room and Everybody

Universal Remote Control Welcomes You to “Entertainment Made Simple”

URC has designed a family of remote controls for you and your home. You can use any of them as you would a normal remote control, by pointing the remote at your components. But, all share the unique ability to send radio signals to base stations installed with your equipment. No more pointing, you can operate your entertainment system through walls, doors or even outside.

The MX-3000 - Dynamic Entertainment System

The color touch screen provides both simplicity for the casual user and the ultimate power and flexibility for the most demanding user.

Theater & Seating by CinemaTech Inc., www.mycinematech.com

The Medius (TX-1000)

Text touch screen melded with elegant styling, optimized for table-top use.

The Aurora (MX-950)

Built for people who prefer to operate even the most complex systems while holding the control in one hand.

Installation by Connected Technologies, Colorado Springs, CO

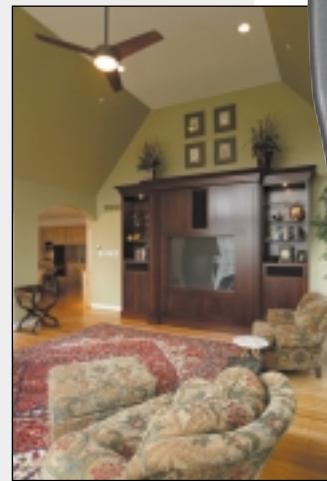

The Genesis (MX-900)

Elegantly automates typical home theaters and whole house music systems.

The Aeros (MX-850)

Automates Family or Living Room Home Theater Systems.

Installation by Stone-Glidden, King of Prussia and Doylestown, PA

The Omega (MX-650)

Perfect for Dens, Bedrooms

Installation by Stone-Glidden, King of Prussia and Doylestown, PA

The Osiris (MX-350)

Ideal for Kitchens, Patios, Bars, Children's and Guest Rooms

Installation by Connected Technologies, Colorado Springs, CO

The MX-3000 Color Touch Screen

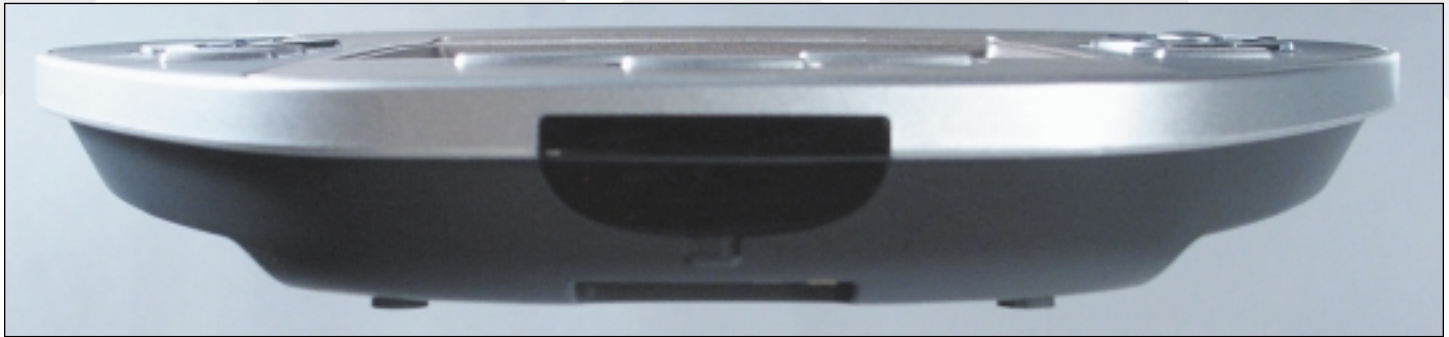

Installation by Connected Technologies, Colorado Springs, CO

The MX-3000 Dynamic Entertainment System provides the ultimate in personalized control for the most sophisticated system. The MX-3000 provides perfect hard button control for the most frequently used commands and touch screen buttons for every activity. The MX-3000 can control up to 255 devices, components or zones, making it the perfect “Master” remote capable of operating from every room in your home.

Capable of displaying thousands of color icon buttons and screens, programmed by a professional installer, the MX-3000 can display different control layouts for different users. This means everyone sees just the buttons they need. Different styles of animated color graphics with sounds add fun to the customization of your MX-3000.

The MX-3000's ultra thin profile is carefully contoured to naturally fit your hands. The extraordinary thinness of the MX-3000 is due to the miniaturization of all components, including the Lithium Ion rechargeable battery. This battery gives long life with heavy use. Unlike other rechargeable batteries, the MX-3000's Lithium battery has no "memory", so the remote can be stored on the charger without harming battery capacity or life.

Three Reasons Why You Should Allow a Professional Automate Your Home Entertainment System

More enjoyment from your investment

Professional programming makes the system work for you—and for every member of your family—so you'll get more enjoyment from your investment.

Zero to DVD with a single push

Your system is loaded with features and functions—control all of them easily without a lot of confusing button pushing sequences. Go from zero to DVD with a single push.

Get ready to blush

Your neighbors will turn green with envy when they see and hear what your new home theater can do. Be ready to blush with pride.

The Medius (TX-1000)

The Medius revolutionizes Home Theater operation via a big, backlit, LCD touch-screen display with large, legible letters that are easily read from a distance, and customized for every user's individual needs. Anyone who prefers to operate his or her system from the coffee table will appreciate the Medius's revolutionary approach to making the complex appear easy to use, while gracing their theaters with its elegant design.

Fully digital, the Medius achieves its remarkable accessibility through a graphic interface optimized for use without having to pick it up first. Simply press the WATCH button and select whatever you'd like to watch TV, DVD, Cable, Satellite, VCR, etc. When you'd like to listen to a CD, the radio or your iPod, press the LISTEN button and select the source you'd like. The Medius automated system configuration (programmed by your installer) takes care of everything else for you!

The Medius' large vivid text labels on the touch screen can be customized with up to six characters and only displays the buttons you need, no more and no less, for the easiest possible user interface regardless of what you are operating. The hard buttons placed around the screen offer the most common functions without symbols you can't remember how to use.

The Medius' bright, multicolored backlighting ensures that the touch screen can be used in the total darkness of a home theater with one touch to the LIGHT button.

Still, Three More Reasons Why You Should Allow a Professional Automate Your Home Entertainment System

Control your universe

Power off every TV in the house with a single push. Listen to tunes on the patio without leaving the lounge chair. Go where remotes have never gone before.

Entertainment Made Simple

Give every member of the family their own personal menu—with understandable labels—all on the same remote. Everyone can watch or hear their favorites without fuss.

Stay tuned

Digital Learning enables our Complete Control remotes from to perfectly reproduce command sequences for any new products you may purchase in the future.

The Aurora (MX-950)

Theater & Seating by CinemaTech Inc., www.mycinemattech.com

The Aurora brings enough capacity to totally control and automate hundreds of devices throughout your home. This makes the Aurora perfectly suitable for use as a Master Remote for large systems with complex home theaters and many secondary systems throughout the house.

The Aurora brings a new clarity to operation with its activity based menus. Simply press the WATCH button to see a list of what you can watch on TV in your system. When you feel like listening to music, simply press the LISTEN button to reveal a list of what you can hear on your system. Once you make a selection, the Aurora's automation takes over and completely reconfigures your system to watch or listen to the selected choice.

The Aurora's LCD screen custom labeling capability enables customization not only to the Watch and Listen menus, but every page of the remote as well.

The Aurora's clear LCD display custom labels buttons with up to 11 character descriptions of activities and special commands.

The Aurora's unique shape fits comfortably into the hand and is designed to suit both left and right handed users.

The Aurora, like the MX-3000 is provided with a rechargeable Lithium Ion battery, which gives long life even with heavy use. Unlike other rechargeable batteries, the Aurora's Lithium battery has no "memory", so the remote can be stored on the charger without harming battery performance or life.

The charger base indicates when the battery is charging or fully charged. The charger also provides an attractive place to store your Aurora when not in use.

Three Additional Reasons Why You Should Allow a Professional Automate Your Home Entertainment System

Professionals do it right

Do-it-yourself is fine for backyard barbecues but programming electronic devices is done best by our custom professionals. After all, they do this day after day.

No more pointing

Sophisticated technology—similar to what's used in police radios—allows you to control devices through walls, between floors and from anywhere in the house.

Dump the clutter

Get the ugly clutter off of the coffee table. You'll no longer need a separate remote for each device. And we can hide the base stations and wires in places where you'll never see them.

The Genesis (MX-900)

Perfectly optimized for those with HDTV theaters, the Genesis offers true one handed control via convenient styling. Indents in the body enable you to locate the most frequently used buttons by feel, and the bright blue back-lighting illuminates a powerful array of buttons labeled in plain English (no cryptic symbols). Finally, you can instantly find the functions you need to skip commercials, access the menu/guide or skip back to replay the action on screen.

Bottom line: The Genesis puts the power you need for your home theater in the palm of your hand.

The Genesis is equipped with an extraordinary “flexible memory” architecture, which allows your professional programmer to create unique features just for you. Would you like a set of one touch “favorite channels” for your four-year-old daughter? How about a sports page, with all your favorite sports channels on one page? Genesis can be custom programmed to your exact requirements!

The Genesis will astound you and your family. Whenever you want to watch or listen to something new, simply tap the WATCH or LISTEN buttons, then select the activity you’d like (Watching a DVD movie, Watching TV etc.). The Genesis eliminates the nightmare of setting up your TV, then your surround receiver, then your Satellite receiver, etc. With one touch, Genesis takes care of everything and then signals that it’s finished by displaying the new activity at the top of the screen and reconfiguring all the buttons to operate everything you need with large, easy to read, seven-character labels.

Have some special features only you use? Genesis can accommodate any user’s preferences by displaying as many of your component’s special features as you care to use. The large, well placed Page buttons enable you to access additional pages of less frequently used commands. This unique feature gives Power Users the ability to control everything while preserving a simple and straightforward interface for the casual users in your family (or the babysitter!).

NO MORE ICONS or symbols you can’t understand or remember how to use. No more searching for the PLAY button! The hard buttons are all clearly labeled, to watch your DVD simply press the button labeled “PLAY”!

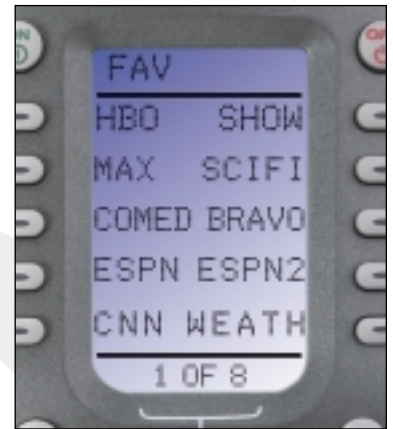

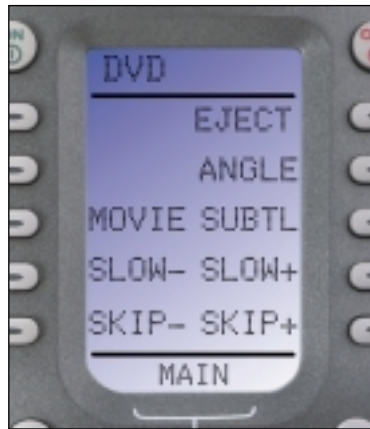

The Aeros (MX-850)

Installation by Connected Technologies, Colorado Springs, CO

The Aeros automates home theaters and systems with up to twenty components or devices. The combination of a full set of backlit hard buttons and the array of buttons labeled by the LCD screen makes the Aeros fully capable of automating and controlling very complex systems. Because the Aeros is PC programmable, professional installers can provide a very customized interface with easy to understand five character labels and complex macros to make one touch automation a reality in your system.

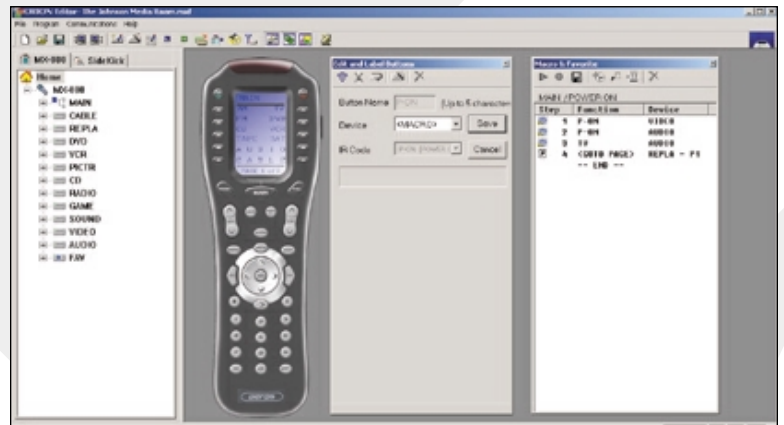

Every component is clearly labeled and your favorite channels tune in with one push of a button.

The Aeros' LCD display custom labels buttons with up to five character descriptions of activities and special commands.

The Aeros is capable of automating your favorite activities in a system with up to 20 components or devices.

The Aeros' FAV (Favorites) button enables you to select up to 50 of your favorite channels with one touch, without having to remember the actual channel numbers.

Professional programmers use Aeros' PC software to efficiently customize your remote.

Aeros' interface is easily customizable by your custom installer. For example, the Aeros allows each of your devices to display up to four pages of custom labeled buttons. However; by utilizing the power of PC programming, your interface can be reduced to one or two pages with only the buttons you need to display.

With the Aeros, there is no longer confusion over strange technical button labels. Your custom installer can label commands with names that you are comfortable with.

The Omega (MX-650)

Installation by Connected Technologies, Colorado Springs, CO

The Omega provides a great interface for simpler systems. It has custom labeling capacity for the buttons on each LCD page and can control up to twenty devices. The Omega is programmed standalone, without a PC and offers some customization capability. The Omega is a great choice for a room with a simple system and access to whole house music.

The Osiris (MX-350)

Installation by Stone-Gridden, King of Prussia and Doylestown, PA

Installation by Connected Technologies, Colorado Springs, CO

In rooms with a television or two, and the possibility of access to some of your main A/V sources, the Osiris offers a simpler interface for up to ten components via standalone programming. It's LCD screen displays five buttons per screen, making everything simpler for casual users.

The Osiris has a FAV (Favorite) button which lists up to 40 of your favorite channels. Like all of the other remotes in this URC custom family, a single touch of the remote instantly delivers your favorite channel, song or movie.

The Magic of No Rules Operation Everywhere in Your Home

You won't achieve the full potential of the Complete Control system unless you add our RF (Radio Frequency) Automation Stations to your home. Although any of our controls can operate on their own, line of sight with your system components, they all have the ability to send radio signals in every direction. These signals travel through walls and floors, indoors and outdoors enabling your installer to hide all your equipment away. You no longer have to point the remote when you use it! Simply press a button, wherever the remote happens to be. Instead of long, painful waits while the control sends an automated routine to your components, simply touch a button, and put the control down. The automated routine is sent without pointing, without holding the remote steady. The true magic of automated controls happens when you complete the system!

MRF-300 Multi Zone RF Base Station

The MRF-300 system includes both a controller that interconnects with your system components via serial IR, and an outboard RF receiver (the RFX-150) which allows your installer to provide you with robust RF reception. The MRF-300 system can be expanded to control any system.

MRF-250 Single Zone RF Base Station

The MRF-250's miniaturized one piece design is perfect for simple locations with one or two components.

Ten Reasons Why You Should Allow a Professional Automate Your Home Entertainment System

More enjoyment from your investment

Professional programming makes the system work for you—and for every member of your family—so you'll get more enjoyment from your investment.

Zero to DVD with a single push

Your system is loaded with features and functions—control all of them easily without a lot of confusing button pushing sequences. Go from zero to DVD with a single push.

Get ready to blush

Your neighbors will turn green with envy when they see and hear what your new home theater can do. Be ready to blush with pride.

Professionals do it right

Do-it-yourself is fine for backyard barbecues but programming electronic devices is done best by our custom professionals. After all, they do this day after day.

No more pointing

Sophisticated technology—similar to what's used in police radios—allows you to control devices through walls, between floors and from anywhere in the house.

Dump the clutter

Get the ugly clutter off of the coffee table. You'll no longer need a separate remote for each device. And we can hide the base stations and wires in places where you'll never see them.

Control your universe

Power off every TV in the house with a single push. Listen to tunes on the patio without leaving the lounge chair. Go where remotes have never gone before.

Entertainment Made Simple

Give every member of the family their own personal menu—with understandable labels—all on the same remote. Everyone can watch or hear their favorites without fuss. It's entertainment made simple.

Digital Learning enables our Complete Control remotes from to perfectly reproduce command sequences for any new products you may purchase in the future.

Universal Remote Control

Our products allow professional programmers to give you complete control of your universe. Our motto is Entertainment Made Simple.

CEDIA - The "Custom Installed" Difference...

Providing a remote control with great capabilities is only half the equation that will bring true one touch operation to your custom installed entertainment system. In the complex world of audio video system components, you need a shield from the intricate problems of automation and control. Only a custom installation professional has the experience and training to provide you with a truly automated one touch experience with your control system. Custom installers can be found everywhere in the world. A unique educational and trade organization called CEDIA (for Custom Electronic Design and Installation Association) offers world wide links to a member company near you at their web site.
