

a-JAYS Four

Walk. Talk. Listen.

Our award-winning a-JAYS with flat tangle-free cables are now available with a full-feature three-button remote for Apple's iPhone. With the beloved sound signature from our a-JAYS tweaked to perform even better in the voice frequency ranges and a design made to match your iPhone 4, you can now be sure to get the most out of your music and calls. Just Walk. Talk. Listen.

Flat tangle-free cables

No more annoyingly tangled cables. JAYS newly-developed flat cable technology delivers precise, full-bodied sound with minimum tangle. As well as being extremely practical and flexible, this 5mm wide cable will definitely make you stand out from the crowd.

Full feature remote

The remote on the a-JAYS Four is a three-button remote with SMART-feel soft touch concave/convex buttons for perfect grip and carefully selected state-of-the-art components giving you a complete full-feature solution and options to play/pause music and videos, answer/hang up calls, skip songs and voice control etc.

Invisible technology

Our remote uses the latest available microphone technology out there. It's a digital, active surface-mounted MEMS silicone microphone that removes GSM/TDMA burst noise and provides wide-band RF noise suppression. This means it has the best performance on the market and we also have it in our newly developed remote control, of course. The MEMS microphone also works in 360 degrees meaning it will effectively pick up your speech in any position.

Made for

iPod

iPhone

iPad

Color / Finish	Rubber Coated Black / Metal
Speaker	8.6mm Custom Speaker
Isolation	JAYS Sound Isolating System
Sensitivity	96 dB SPL @ 1 kHz
Impedance	16 Ohm @ 1 kHz
